Wait!

Before you return it, see if this solves your problem

Cannot charging ?

Solve way:Connect the extension cord to your existing charger,slide the lock button to “lock” position ,wait a few seconds. then connect it to the car. If Connecting it to the car first, it often shows up as "not ready" and won't charge.

How to unlock (About release button):

Please use the release button on the ORIGINAL TSL PLUG, the TSL APP, or the CAR'S CONSOLE to disconnect.

For more and more buyers feedback that release button not working. We've identified that TSL has restricted this release function at the vehicle end(Before we tested successful and save the video record). We've tried everything to fix it with them, but no luck yet. This is not a defect in the product.

If the length of extension cord is not enough

You can splice another extension cord into a longer one for use, without having to replace it with a 40ft or 50ft,support max 100ft charging.

Experiencing overheating? Try these fixes:

Check connections: Make sure both ends of the cable are pushed in all the way with no gaps.
Lower the charge rate: High heat can be caused by the environment. Try reducing the power in your charger

Attention:

- Don't use the extension cord during heavy rain.Especially work together with the adapter(they are not waterproof at all)
- Make sure the output is less than 50Amp and 250V.
- Please slide lock button while pull out the NACS plug from the extension cord.
- Do not attempt to open, disassemble, repair, tamper with, or modify the adapter.
- Do not use the Extension cord if it is broken.
- Keep the extension cord dry and away from high heat.
- Handle with care
